UNITED STATES SECURITIES AND EXCHANGE COMMISSION  
WASHINGTON, D.C. 20549

**FORM 10-Q**

- QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the quarterly period ended March 31, 2006.

or

- TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the transition period from \_\_\_\_\_ to \_\_\_\_\_.

Commission File Number: 000-30269

**PIXELWORKS, INC.**

(Exact name of registrant as specified in its charter)

**OREGON**

(State or other jurisdiction of incorporation)

**91-1761992**

(I.R.S. Employer Identification No.)

**8100 SW Nyberg Road  
Tualatin, Oregon 97062  
(503) 454-1750**

(Address of principal executive offices, including zip code,  
and Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the last 90 days.

Yes  No

Indicate by check mark whether the registrant is a large accelerated filer, or a non-accelerated filer (as defined in Rule 12b-2 of the Exchange Act).

Large accelerated filer

Accelerated filer

Non-accelerated filer

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes  No

Number of shares of Common Stock outstanding as of April 28, 2006: 47,537,576

**PIXELWORKS, INC.**  
**NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS**  
**(In thousands, except share and per share data)**  
**(Unaudited)**

**NOTE 1: BASIS OF PRESENTATION**

**Nature of Business**

Pixelworks, Inc. (“Pixelworks” or the “Company”) is a leading designer, developer and marketer of semiconductors and software for the advanced display industry, including advanced televisions, multimedia projectors, digital streaming media devices and flat panel products. Our system-on-chip and discrete semiconductors provide the ‘intelligence’ for these types of displays and devices by processing and optimizing video and computer graphic signals to produce high-quality images.

**Condensed Consolidated Financial Statements**

These condensed consolidated financial statements have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission. Certain information and footnote disclosures normally included in financial statements prepared in accordance with U.S. generally accepted accounting principles (“GAAP”) have been condensed or omitted pursuant to such regulations, although we believe that the disclosures provided are adequate to prevent the information presented from being misleading.

The financial information included herein for the three months ended March 31, 2006 and 2005 is unaudited; however, such information reflects all adjustments, consisting only of normal recurring adjustments, that are, in the opinion of management, necessary for a fair presentation of the financial position, results of operations and cash flows of the Company for these interim periods. The financial information as of December 31, 2005 is derived from our audited consolidated financial statements and notes thereto for the fiscal year ended December 31, 2005, included in Item 8 of our Annual Report on Form 10-K, and should be read in conjunction with such consolidated financial statements.

The results of operations for the three months ended March 31, 2006 are not necessarily indicative of the results expected for the entire fiscal year ending December 31, 2006.

**Use of Estimates**

The preparation of consolidated financial statements in conformity with GAAP requires us to make estimates and judgments that affect the amounts reported in the financial statements and accompanying notes. Our significant estimates and judgments include those related to product returns, warranty obligations, bad debts, inventory valuation, property and equipment, valuation of share-based payments, intangible assets and income taxes. The actual results experienced by the Company could differ materially from our estimates.

**Reclassifications**

Certain reclassifications have been made to the 2005 condensed consolidated financial statements to conform with the 2006 presentation, and include the reclassification of stock-based compensation to research and development expense and selling, general and administrative expense.

**NOTE 2: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES**

**Impairment of Long-Lived Assets**

Reviews for impairment of long-lived assets are performed whenever events or circumstances indicate that the carrying amount of assets may not be recoverable, or that the useful life of assets is shorter than originally estimated. Impairment is assessed in accordance with Statement of Financial Accounting Standards No. ("SFAS") 144, *Accounting for the Impairment or Disposal of Long-lived Assets* ("SFAS 144"), by comparing the projected undiscounted net cash flows associated with the assets over their remaining useful lives against their respective carrying amounts. Impairment, if any, is based on the excess of the carrying amount over the fair value of the assets. During the three months ended March 31, 2006, we recorded impairment charges on certain acquired intangible assets. See note 4.

**NOTE 3: STOCK-BASED COMPENSATION**

**Stock-Based Compensation Expense**

On January 1, 2006, we adopted SFAS 123 (revised 2004), *Share-Based Payment* ("SFAS 123R"), which requires the measurement and recognition of compensation expense for all share-based payment awards, including stock options, based on the estimated fair value of the awards. Under SFAS 123R, the fair value of the portion of the award that is ultimately expected to vest is recognized as expense over the requisite service period. In March 2005, the Securities and Exchange Commission issued Staff Accounting Bulletin No. 107 ("SAB 107") relating to SFAS 123R, which we have applied in our adoption of SFAS 123R. Upon adoption of SFAS 123R, we elected to attribute the value of stock-based compensation to expense on the straight line basis.

Prior to the adoption of SFAS 123R, we accounted for stock-based awards to employees and directors using the intrinsic value method in accordance with Accounting Principles Board Opinion No. 25, *Accounting for Stock Issued to Employees* ("APB 25") as allowed under SFAS 123, *Accounting for Stock-Based Compensation* ("SFAS 123"). Under the intrinsic value method, stock-based compensation was measured as the excess, if any, of the quoted market price of Pixelworks' common stock on the date of grant, or other measurement date, over the amount that the option holder had to pay to acquire the stock.

We used the modified prospective transition method in adopting SFAS 123R. Our condensed consolidated financial statements as of and for the three months ended March 31, 2006 reflect the impact of SFAS 123R, and the condensed consolidated financial statements for prior periods have not been restated to reflect, and do not include, the impact of SFAS 123R.

Stock-based compensation expense recognized in our condensed consolidated statement operations for the three months ended March 31, 2006 includes 1) compensation expense of \$2,595 for share-based payment awards granted prior to, but not yet vested, as of December 31, 2005, based on the grant date fair value estimated in accordance with the pro forma provisions of SFAS 123 and 2) compensation expense of \$205 for the share-based payment awards granted subsequent to December 31, 2005 based on the grant date fair value estimated in accordance with the provisions of SFAS 123R. Loss before income taxes and net loss would have been lower by \$2,621, and basic and diluted net loss per share would have been \$0.63 had we continued to account for our stock-based awards to employees in accordance with APB 25. No stock-based compensation cost was capitalized as a part of an asset during the three months ended March 31, 2006. Prior to the adoption of SFAS 123R, benefits of tax deductions in excess of recognized compensation costs were reported as operating cash flows. SFAS 123R requires the benefits of tax deductions in excess of the compensation cost recognized for those options to be classified as financing cash inflows rather than operating cash inflows, on a prospective basis. This amount would be shown as "Excess tax benefit from exercise of stock options" on the consolidated statements of cash flows. There was no realized excess tax benefits in the three months ended March 31, 2006.

[Table of Contents](#)

The fair value of stock-based compensation was determined using the Black-Scholes option pricing model and the following weighted average assumptions:

	Three Months Ended	
	March 31,	
	2006	2005
Stock Option Plans:		
Risk free interest rate	4.53%	4.08%
Expected dividend yield	0%	0%
Expected term (in years)	4.5	7.3
Volatility	76%	96%
Employee Stock Purchase Plan:		
Risk free interest rate	4.53%	2.00%
Expected dividend yield	0%	0%
Expected term (in years)	0.5	0.8
Volatility	47%	92%

The weighted average fair value of options granted during the three months ended March 31, 2006 and 2005 was \$3.02 and \$7.92, respectively. The risk free interest rate is estimated using an average of treasury bill interest rates. The expected dividend yield is zero as we have not paid any dividends to date and do not expect to pay dividends in the future. The expected term is estimated using expected and historical exercise behavior. The expected volatility is estimated using historical calculated volatility and considers factors such as future events or circumstances that could impact volatility.

## [Table of Contents](#)

Had we accounted for stock-based compensation in accordance with SFAS 123 prior to January 1, 2006, our net loss would have approximated the pro-forma amount for the three months ended March 31, 2005 as follows:

	<b>Three Months Ended March 31, 2005</b>
Net income as reported	\$ 836
Add: Stock-based compensation included in reported net income, net of related tax effects	11
Deduct: Stock-based compensation determined under the fair value based method, net of related tax effects	(2,719)
Pro-forma net loss	<u>\$ (1,872)</u>
Basic net income (loss) per share:	
As reported	\$ 0.02
Pro-forma	<u>\$ (0.04)</u>
Diluted net income (loss) per share:	
As reported	\$ 0.02
Pro-forma	<u>\$ (0.04)</u>

As of March 31, 2006, unrecognized compensation cost is \$21,778, which is expected to be recognized as compensation expense over a weighted average period of 2.9 years.

### **Stock Option Plans**

A total of 20,340,116 and 4,000,000 stock options may be granted under our 1997 Stock Incentive Plan and 2001 Nonqualified Stock Option Plan, respectively, (the "option plans"). Options granted under the option plans must generally be exercised while the individual is an employee and within ten years of the date of grant. Our new-hire vesting schedule provides that each option becomes exercisable at a rate of 25% on the first anniversary date of the grant, and 2.083% on the last day of every month thereafter for a total of thirty-six additional increments. Our merit vesting schedule provides that options become exercisable monthly for a period of 4 years, with 10% becoming exercisable in the first year, 20% becoming exercisable in the second year, 30% becoming exercisable in the third year and 40% becoming exercisable in the fourth year.

## [Table of Contents](#)

The following is a summary of stock option activity for the three months ended March 31, 2006:

	<u>Number of shares</u>	<u>Weighted average exercise price</u>
Options outstanding as of December 31, 2005	9,163,482	\$ 10.09
Granted	1,190,155	4.83
Exercised	(210,229)	0.75
Forfeited	(383,919)	12.30
Expired	(462,579)	15.18
Options outstanding as of March 31, 2006	<u>9,296,910</u>	\$ 9.29

During the three months ended March 31, 2006, the total intrinsic value of options exercised was \$903, for which no income tax benefit has been recorded. As of March 31, 2006, the total intrinsic value of options outstanding was \$3,894, and a weighted average remaining contractual life of 7.7 years.

As of March 31, 2006, there were 4,298,485 options exercisable with a weighted average exercise price of \$10.31, an aggregate intrinsic value of \$3,313, and a weighted average remaining contractual life of 6.3 years.

As of March 31, 2006, there were 7,705,482 options vested and expected to vest with a weighted average exercise price of \$9.56, an aggregate intrinsic value of \$3,700, and a weighted average remaining contractual life of 7 years.

As of March 31, 2006, 3,981,562 shares were available for grant under the option plans.

### **Employee Stock Purchase Plan**

A total of 1,700,000 shares of common stock have been reserved for issuance under the Employee Stock Purchase Plan ("ESPP"). The number of shares available for issuance under the ESPP increases each year in an amount equal to the lesser of (i) the number of shares of common stock issued pursuant to the ESPP during the immediately preceding fiscal year, (ii) two percent of the outstanding shares of common stock on the first day of the year for which the increase is being made or (iii) a lesser amount determined by the Board of Directors. During the three months ended March 31, 2006, the Company issued 142,719 shares under the ESPP for proceeds of approximately \$691. As of March 31, 2006, there were 709,204 shares available for issuance under this plan.

### **NOTE 4: BALANCE SHEET COMPONENTS**

#### **Marketable Securities**

As of March 31, 2006 and December 31, 2005, all of our short- and long-term marketable securities were classified as available-for-sale.

Unrealized holding losses on short- and long-term available-for-sale securities, net of tax, were \$99 and \$2,615, respectively, as of March 31, 2006 and \$147 and \$3,356, respectively, as of December 31, 2005.

## [Table of Contents](#)

These unrealized holding gains (losses) are recorded in accumulated other comprehensive loss, a component of shareholders' equity, in the condensed consolidated balance sheets.

### **Accounts Receivable, Net**

Accounts receivable are recorded at invoiced amount and do not bear interest when recorded or accrue interest when past due. We do not have any off balance sheet exposure risk related to customers. Accounts receivable are stated net of an allowance for doubtful accounts, which is maintained for estimated losses that may result from the inability of our customers to make required payments. Accounts receivable, net consists of the following:

	<b>March 31, 2006</b>	<b>December 31, 2005</b>
Accounts receivable, gross	\$ 17,248	\$ 20,139
Less: allowance for doubtful accounts	(200)	(212)
Accounts receivable, net	<u>\$ 17,048</u>	<u>\$ 19,927</u>

The only change in the allowance for doubtful accounts during the three months ended March 31, 2006 and 2005 was the write-off of approximately \$12 in the three month period ended March 31, 2006.

### **Inventories, Net**

Inventories consist of finished goods and work-in-process, and are stated at the lower of standard cost (which approximates actual cost on a first-in, first-out basis) or market (net realizable value), net of a reserve for slow moving and obsolete items. Inventories, net consists of the following:

	<b>March 31, 2006</b>	<b>December 31, 2005</b>
Finished goods	\$ 18,923	\$ 20,623
Work-in-process	7,639	7,350
	26,562	27,973
Less: reserve for slow moving and obsolete items	(2,983)	(1,396)
Inventory, net	<u>\$ 23,579</u>	<u>\$ 26,577</u>

[Table of Contents](#)

The following is the change in our reserve for slow moving and obsolete items:

	Three Months Ended	
	March 31,	
	2006	2005
Balance at beginning of period	\$ 1,396	\$ 1,589
Provision	1,704	8
Usage:		
Inventory utilized	(90)	(132)
Inventory scrapped	(27)	(24)
Total usage	(117)	(156)
Balance at end of period	<u>\$ 2,983</u>	<u>\$ 1,441</u>

While we do not currently expect to be able to sell or otherwise use the reserved inventory we have on hand at March 31, 2006 based upon our forecast and backlog, it is possible that a customer will decide in the future to purchase a portion of the reserved inventory. It is not possible for us to predict if or when this may happen, or how much we may sell. If such sales occur, we do not expect they will have a material impact on gross profit margin.

**Property and Equipment, Net**

Property and equipment, net consists of the following:

	March 31,	December 31,
	2006	2005
Gross carrying amount of assets	\$ 63,528	\$ 60,546
Less: accumulated depreciation and amortization	(34,823)	(31,517)
Property and equipment, net	<u>\$ 28,705</u>	<u>\$ 29,029</u>

[Table of Contents](#)**Acquired Intangible Assets, Net**

Acquired intangible assets, net consists of the following:

	<u>March 31,</u> <u>2006</u>	<u>December 31,</u> <u>2005</u>
Cost:		
Developed technology	\$ 19,170	\$ 40,500
Customer relationships	1,689	3,400
Backlog and trademark	758	800
	<u>21,617</u>	<u>44,700</u>
Accumulated amortization:		
Developed technology	(8,029)	(6,057)
Customer relationships	(897)	(614)
Backlog and trademark	(758)	(708)
	<u>(9,684)</u>	<u>(7,379)</u>
Acquired intangible assets, net	<u>\$ 11,933</u>	<u>\$ 37,321</u>

In April 2006, we initiated a plan to improve our breakeven point by reducing manufacturing overhead and operating expenses and focusing on our core business. The plan includes integrating the Internet Protocol television (IPTV) technology that we acquired as a result of our acquisition of Equator Technologies, Inc. ("Equator") in June 2005 with our advanced television technology product developments. We will no longer pursue stand-alone digital media streaming markets that are not core to advanced television. In addition, we performed an impairment analysis in accordance with SFAS 144 as of March 31, 2006 on acquired intangible assets. We recorded impairment losses on the developed technology, customer relationships and trademark intangible assets acquired from Equator. The impairment losses were equal to the excess of the carrying value over the estimated fair value of these intangible assets. Estimated fair value was determined using the discounted cash flow method. The new cost basis of these acquired intangible assets is being amortized over their remaining useful lives. The impairment loss of \$23,083 is included in our statement of operations for the three months ended March 31, 2006, of which \$21,330 is related to developed technology and is included in cost of revenue.

Estimated amortization expense is as follows:

Nine Months Ending December 31:	
2006	\$ 2,384
Year Ending December 31:	
2007	3,179
2008	2,984
2009	2,336
2010	1,050
	<u>\$ 11,933</u>

[Table of Contents](#)

**Accrued Liabilities and Current Portion of Long-Term Liabilities**

Accrued liabilities and current portion of long-term liabilities consists of the following:

	<u>March 31, 2006</u>	<u>December 31, 2005</u>
Current portion of accrued liabilities for asset financings	\$ 11,546	\$ 11,940
Accrued payroll and related liabilities	3,844	5,294
Accrued manufacturing liabilities	2,853	3,612
Accrued commissions and royalties	1,191	1,232
Accrued interest payable	947	335
Reserve for warranty returns	879	577
Reserve for sales returns and allowances	244	237
Other	2,536	3,042
	<u>\$ 24,040</u>	<u>\$ 26,269</u>

The following is the change in our reserve for sales returns and allowances:

	<u>Three Months Ended March 31,</u>	
	<u>2006</u>	<u>2005</u>
Balance at beginning of period	\$ 237	\$ 524
Provision	78	73
Charge offs	(71)	(245)
Balance at end of period	<u>\$ 244</u>	<u>\$ 352</u>

The following is the change in our reserve for warranty returns:

	<u>Three Months Ended March 31,</u>	
	<u>2006</u>	<u>2005</u>
Balance at beginning of period	\$ 577	\$ 419
Provision	834	127
Charge offs	(532)	(83)
Balance at end of period	<u>\$ 879</u>	<u>\$ 463</u>

**Long-Term Debt**

As of March 31, 2006, we have \$140,000 of convertible subordinated debentures (the "debentures") outstanding. The debentures are due 2024 and bear interest at a rate of 1.75% per annum, payable on May 15 and November 15 of each year.

## [Table of Contents](#)

The debentures are convertible, under certain circumstances, into our common stock at a conversion rate of 41.0627 shares of common stock per \$1 principal amount of debentures for a total of 5,748,778 shares. This is equivalent to a conversion price of approximately \$24.35 per share. The debentures are convertible if (a) during any calendar quarter, the market price of our common stock exceeds 130% of the conversion price per share for at least 20 trading days during the period of 30 consecutive trading days ending on the last trading day of the previous calendar quarter, (b) the trading price of the debentures declines to less than 98% of the product of the closing sale price of our common stock and the number of shares issuable upon conversion of \$1 principal amount of the debentures for five consecutive trading days, (c) a call for redemption occurs, or (d) in the event of certain other corporate transactions.

We may redeem some or all of the debentures for cash on or after May 15, 2011 at a price equal to 100% of the principal amount of the debentures plus accrued and unpaid interest. The holders of the debentures have the right to require us to purchase all or a portion of their debentures on May 15, 2011, May 15, 2014 and May 15, 2019 at a price equal to 100% of the principal amount plus accrued and unpaid interest.

We have filed a shelf registration statement with the Securities and Exchange Commission covering resales of the debentures and the common stock issuable upon conversion of the debentures. The registration statement was declared effective August 24, 2004. The debentures are unsecured obligations and are subordinated in right of payment to all our existing and future senior debt.

In February 2006, we repurchased in the open market, and retired, \$10,000 of our outstanding debentures for \$6,800. We recognized a gain on the repurchase of \$3,200 which is included in our statement of operations for the three months ended March 31, 2006, net of a write-off of \$191 of debt issuance costs.

### **NOTE 4: COMPREHENSIVE LOSS**

Total comprehensive loss was as follows:

	Three Months Ended	
	March 31,	
	2006	2005
Net income (loss)	\$ (33,055)	\$ 836
Unrealized gain (loss) on available-for-sale investments, net of tax	789	(1,633)
Total comprehensive loss	<u>\$ (32,266)</u>	<u>\$ (797)</u>

### **NOTE 5: EARNINGS PER SHARE**

We calculate earnings per share in accordance with SFAS 128, *Earnings per Share*. Basic earnings per share amounts are computed based on the weighted average number of common shares outstanding, and include exchangeable shares. These exchangeable shares, which were issued on September 6, 2002 by Jaldi, our Canadian subsidiary, to its shareholders in connection with the Jaldi asset acquisition, have characteristics essentially equivalent to Pixelworks' common stock.

Diluted weighted average shares outstanding includes the incremental number of common shares that would be outstanding assuming the exercise of certain stock options, when such exercise would have the effect of reducing earnings per share, and the conversion of our convertible debentures, using the if-converted method, when such conversion is dilutive.

[Table of Contents](#)

The following schedule reconciles basic and diluted weighted average shares outstanding:

	Three Months Ended	
	March 31,	
	2006	2005
Basic weighted average shares outstanding	47,946,980	46,968,672
Incremental shares related to stock options	—	918,482
Diluted weighted average shares outstanding	47,946,980	47,887,154

For the three months ended March 31, 2006, weighted average shares of 9,147,164 and 5,944,976 related to stock options and conversion of the debentures, respectively, were excluded from the calculation of diluted weighted average shares outstanding as their effect would have been anti-dilutive because of our net loss position for the period then ended.

For the three months ended March 31, 2005, weighted average shares of 4,550,741 related to stock options were excluded from the calculation of diluted weighted average shares outstanding because the exercise prices of these options were equal to or greater than the average market price of Pixelworks common stock during this period, which has the effect of making these potential shares anti-dilutive. Additionally, weighted average shares of 6,159,405 related to the conversion of debentures were excluded because their effect would have had increased earnings per share for the period.

Net income (loss) used in the calculation of diluted net income (loss) per share was the same as the net income (loss) used in the calculating basic net income (loss) per share for the three months ended March 31, 2006 and 2005.

**NOTE 6: SEGMENT INFORMATION**

In accordance with SFAS 131, *Disclosures about Segments of an Enterprise and Related Information*, we have identified a single operating segment: the design and development of integrated circuits and software for use in electronic display devices.

[Table of Contents](#)

**Geographic Information**

Revenue by geographic region, attributed to countries based on the domicile of the customer, was as follows:

	Three Months Ended March 31,	
	2006	2005
Japan	\$ 13,057	\$ 13,754
Taiwan	5,061	10,355
China	4,726	4,989
Korea	4,591	3,788
Europe	3,110	6,289
U.S.	2,440	484
Other	3,574	602
	<u>\$ 36,559</u>	<u>\$ 40,261</u>

**Significant Customers**

Sales to distributors represented 42% and 54% of total revenue for the three months ended March 31, 2006 and 2005, respectively. One distributor accounted for 10% or more of total revenue for the three months ended March 31, 2006 and 2005. This distributor represented 21% and 24% of revenue for the three months ended March 31, 2006 and 2005, respectively.

Revenue attributable to our top five end customers represented 35% and 36% of total revenue for the three months ended March 31, 2006 and 2005, respectively. End customers include customers who purchase directly from us, as well as customers who purchase our products indirectly through distributors and manufacturers' representatives. Revenue attributable to the following end customers accounted for 10% or more of total revenue in at least one of the periods presented:

	Three Months Ended March 31,	
	2006	2005
Customer A	13%	7%
Customer B	1%	10%

[Table of Contents](#)

The following accounts represented 10% or more of gross accounts receivable in at least one of the periods presented:

	<b>March 31, 2006</b>	<b>December 31, 2005</b>
Account A	15%	16%
Account B	12%	5%
Account C	5%	11%
Account D	2%	14%

**NOTE 8: RISKS AND UNCERTAINTIES**

**Concentration of Suppliers**

We do not own or operate a semiconductor fabrication facility and do not have the resources to manufacture our products internally. We rely on four third-party foundries to produce all of our products and we do not have any long-term agreements with any of these suppliers. In light of these dependencies, it is reasonably possible that failure to perform by one of these suppliers could have a severe impact on our results of operations.

**Risk of Technological Change**

The markets in which we compete, or seek to compete, are subject to rapid technological change, frequent new product introductions, changing customer requirements for new products and features and evolving industry standards. The introduction of new technologies and the emergence of new industry standards could render our products less desirable or obsolete, which could harm our business.

**Concentrations of Credit Risk**

Financial instruments that potentially subject us to concentrations of credit risk consist of cash equivalents, short- and long-term marketable securities and accounts receivable. We limit our exposure to credit risk associated with cash equivalent and marketable security balances by placing our funds in various high-quality securities and limiting concentrations of issuers and maturity dates. We limit our exposure to credit risk associated with accounts receivable by carefully evaluating creditworthiness before offering terms to customers.

**NOTE 9: COMMITMENTS AND CONTINGENCIES**

**Indemnifications**

Certain of our agreements include limited indemnification provisions for claims from third-parties relating to intellectual property and other matters. Such indemnification provisions are accounted for in accordance with Financial Accounting Standards Board Summary of Interpretation No. 45, *Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others-an interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB Interpretation No. 34*. The amount of the indemnification is limited to the amount paid by the customer or to a limit that bears a reasonable relationship to those amounts. As of March 31, 2006, we have not incurred any material liabilities arising from these indemnification obligations, however in the future, such obligations could immediately impact our results of operations but would not materially affect our business.

**Legal Proceedings**

We are involved in litigation from time to time that is routine in nature and incidental to our business. We believe that the outcome of any such current litigation would not have a material adverse effect on our financial condition, results of operations or cash flows.

**NOTE 10: SUBSEQUENT EVENT**

In April 2006, we initiated a plan to improve our breakeven point by reducing manufacturing overhead and operating expenses and focusing on our core business. The plan includes integrating the Internet Protocol television ("IPTV") technology that we acquired from Equator with our advanced television technology product developments. We will no longer pursue stand-alone digital media streaming markets that are not core to advanced television. This focus and integration will result in lower compensation costs and allow us to consolidate and reduce rent expense. We expect to incur restructuring charges of \$1,600 to \$3,500 over the second and third quarters of 2006.

## **Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations.**

### **Forward-looking Statements**

This Management’s Discussion and Analysis of Financial Condition and Results of Operations and other sections of this Report contain “forward-looking statements” within the meaning of the Securities Litigation Reform Act of 1995 that are based on current expectations, estimates, beliefs, assumptions and projections about our business. Words such as “expects,” “anticipates,” “intends,” “plans,” “believes,” “seeks,” “estimates” and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve certain risks and uncertainties that are difficult to predict. Actual outcomes and results may differ materially from what is expressed or forecasted in such forward-looking statements due to numerous factors. Such factors include, but are not limited to: changes in growth in the advanced television, multimedia projector, digital media streaming devices and flat panel monitor industries; changes in customer ordering patterns or lead times; timing of design introductions and design win cycles; the success of our products in expanded markets; success in achieving operating efficiencies from our restructuring efforts; competitive factors, such as rival chip architectures, introduction or traction by competing designs or pricing pressures; insufficient, excess or obsolete inventory and variations in inventory valuation; our product mix; new product yield rates, changes in regional demand for our product, non-acceptance of the combined technologies by leading manufacturers; changes in recoverability of intangible assets, long lived assets and goodwill; increased competition; continued adverse economic conditions in the U.S. and internationally, including adverse economic conditions in the specific markets for our products, adverse business conditions; failure to design, develop and manufacture new products; lack of success in technological advancements; lack of acceptance of new products; unexpected changes in the demand for our products and services; the inability to successfully manage inventory pricing pressures; failure to reduce costs or improve operating efficiencies; changes to and compliance with international laws and regulations; currency fluctuations; and our ability to attract, hire and retain key and qualified employees.

These forward-looking statements speak only as of the date on which they are made, and we do not undertake any obligation to update any forward-looking statement to reflect events or circumstances after the date of this Quarterly Report on Form 10-Q. If we do update or modify one or more forward-looking statements, you should not conclude that we will make additional updates or modifications with respect thereto or with respect to other forward-looking statements.

(Dollars in thousands, except per share data)

### **Overview**

We are a leading designer, developer and marketer of semiconductors and software for use in advanced televisions, multimedia projectors, digital streaming devices and flat panel products. Our system-on-chip and discrete semiconductors provide the ‘intelligence’ for these types of displays and devices by processing and optimizing video and computer graphic signals to produce high-quality images. Many of the world’s leading manufacturers of consumer electronics and computer display products utilize our technology to enhance image quality and ease of use of their products. Our goal is to provide all of the electronics necessary to process the signal along its entire path through the system in order to provide a turnkey solution for our customers.

We sell our products worldwide through a direct sales force and indirectly through distributors and manufacturers’ representatives. Sales to distributors represented 42% and 54% of total revenue for the

## [Table of Contents](#)

three months ended March 31, 2006 and 2005, respectively. Our distributors typically provide engineering support to our end customers and often have valuable and established relationships with our end customers. In certain countries it is customary to sell to distributors. While distributor payment to us is not dependent upon the distributor's ability to resell the product or to collect from the end customer, the distributors may provide longer payment terms to end customers than those we would offer.

Historically, significant portions of our revenue have been generated by sales to a relatively small number of end customers and distributors. End customers include customers who purchase directly from us, as well as customers who purchase our products indirectly through distributors and manufacturers' representatives. Revenue attributable to our top five end customers represented 35% and 36% of total revenue for the three months ended March 31, 2006 and 2005, respectively.

Significant portions of our products are sold overseas. Sales outside the U.S. accounted for approximately 93% and 99% of total revenue for the three months ended March 31, 2006 and 2005, respectively. Our integrators, branded manufacturers and branded suppliers incorporate our products into systems that are sold worldwide. All revenue to date has been denominated in U.S. dollars.

In April 2006, we initiated a plan to improve our breakeven point by reducing manufacturing overhead and operating expenses and focusing on our core business. The plan includes integrating the Internet Protocol television ("IPTV") technology that we acquired from Equator Technologies, Inc. ("Equator") with our advanced television technology product developments. We will no longer pursue stand-alone digital media streaming markets that are not core to advanced television. This focus and integration will result in lower compensation costs and allow us to consolidate and reduce rent expense. We expect to incur restructuring charges of \$1,600 to \$3,500 over the second and third quarters of 2006.

In addition, we performed an impairment analysis, as of March 31, 2006, on the developed technology, customer relationships and trademark intangible assets acquired from Equator and recorded an impairment loss of \$23,083, which was the excess of the carrying value over the estimated fair value of the assets. The estimated fair value was determined using the discounted cash flow method. The new cost basis of these acquired intangible assets is being amortized over their remaining useful lives.

### **Critical Accounting Policies and Estimates**

Our discussion and analysis of our financial condition and results of operations is based on our consolidated financial statements, which have been prepared in accordance with U.S. generally accepted accounting principles ("GAAP"). The preparation of financial statements in conformity with GAAP requires us to make estimates and judgments that affect the amounts reported in the financial statements and accompanying notes. On an on-going basis, we evaluate our estimates, including, but not limited to, those related to revenue recognition, sales returns and allowances, product warranties, allowance for doubtful accounts, inventory valuation, useful lives and recoverability of long-lived assets, goodwill, stock-based compensation, and income taxes. We base our estimates on historical experience and various other assumptions that we believe to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions.

We believe the following critical accounting policies affect our more significant judgments and estimates used in the preparation of our consolidated financial statements:

*Revenue Recognition.* We recognize revenue in accordance with Staff Accounting Bulletin No. 104, *Revenue Recognition*. Accordingly, revenue is recognized when an authorized purchase order has been

## [Table of Contents](#)

received, title and risk of loss have transferred, the sales price is fixed or determinable, and collectibility of the receivable is reasonably assured. This generally occurs upon shipment of the underlying merchandise.

*Sales Returns and Allowances.* Our customers do not have a stated right to return product except for replacement of defective products under our warranty program discussed below. However, we have accepted customer returns on a case-by-case basis as customer accommodations in the past. As a result, we provide for these returns in our reserve for sales returns and allowances. At the end of each reporting period, we estimate the reserve based on historical experience and knowledge of any applicable events or transactions.

Certain of our distributors have stock rotation provisions in their distributor agreements, which allow them to return 5-10% of the products purchased in the prior six months in exchange for products of equal value. We analyze historical stock rotations at the end of each reporting period. To date, returns under the stock rotation provisions have been nominal.

Certain distributors also have price protection provisions in their distributor agreements with us. Under the price protection provisions, we grant distributors credit if they purchased product for a specific customer and we subsequently lowered the price to the customer such that the distributor could no longer earn its negotiated margin on in-stock inventory. At the end of each reporting period, we estimate a reserve for price protection credits based on historical experience and knowledge of any applicable events or transactions. The reserve for price protection is included in our reserve for sales returns and allowances.

*Product Warranties.* We warrant that our products will be free from defects in materials and workmanship for a period of twelve months from delivery. Warranty repairs are guaranteed for the remainder of the original warranty period. Our warranty is limited to repairing or replacing products, or refunding the purchase price.

At the end of each reporting period, we estimate a reserve for warranty returns based on historical experience and knowledge of any applicable events or transactions. While we engage in extensive product quality programs and processes, which include actively monitoring and evaluating the quality of our suppliers, should actual product failure rates or product replacement costs differ from our estimates, revisions to the estimated warranty liability may be required.

*Allowance for Doubtful Accounts.* We offer credit to customers after careful examination of their creditworthiness. We maintain an allowance for doubtful accounts for estimated losses that may result from the inability of our customers to make required payments. We evaluate the balance in the allowance based on our historical write-off experience and the age of outstanding receivables at the end of each reporting period. If the financial condition of our customers were to deteriorate, resulting in an impairment of their ability to make payments, additional allowances may be required.

*Inventory Valuation.* We record a reserve against our inventory for estimated obsolete, unmarketable, and otherwise impaired products by calculating the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. We review our inventory at the end of each reporting period for valuation issues. If actual market conditions are less favorable than those we projected at the time the reserve was recorded, additional inventory write-downs may be required.

*Useful Lives and Recoverability of Equipment and Other Long-Lived Assets.* In accordance with Statement of Financial Accounting Standards No. ("SFAS") 144, *Accounting for the Impairment or*

## [Table of Contents](#)

*Disposal of Long-Lived Assets.* we evaluate the remaining useful life and recoverability of equipment and other assets, including intangible assets with definite lives, whenever events or changes in circumstances indicate that the carrying amount of the assets may not be recoverable. If there is an indicator of impairment, we prepare an estimate of future, undiscounted cash flows expected to result from the use of each asset and its eventual disposition. If these cash flows are less than the carrying value of the asset, we adjust the carrying amount of the asset to its estimated fair value based on the discounted flows.

*Goodwill.* Goodwill represents the excess of cost over the fair value of net assets acquired in business combinations and is not amortized. We test goodwill annually for impairment, and more frequently if events and circumstances indicate that it might be impaired. The impairment tests are performed in accordance with SFAS 142, *Goodwill and Other Intangible Assets*. Accordingly, an impairment loss is recognized to the extent that the carrying amount of goodwill exceeds its implied fair value. This determination is made at the reporting unit level. We have assigned all goodwill to a single, enterprise-level reporting unit. The impairment test consists of two steps. First, we determine the fair value of the reporting unit. The fair value is then compared to its carrying amount. Second, if the carrying amount of the reporting unit exceeds its fair value, an impairment loss is recognized for any excess of the carrying amount of the reporting unit's goodwill over the implied fair value of that goodwill. The implied fair value of goodwill is determined by allocating the fair value of the reporting unit in a manner similar to a purchase price allocation in accordance with SFAS 141, *Business Combinations*. The residual fair value after this allocation is the implied fair value of the reporting unit goodwill. We perform our annual impairment test in the first quarter of each year.

We did not record any goodwill impairment charges in 2005, 2004 or 2003 as a result of the impairment tests performed. We performed our 2006 annual impairment test on January 1, 2006 and determined no impairment existed. Because the market value of our reporting unit was approaching book value during the first quarter of 2006, we performed an additional impairment test on March 31, 2006 and determined no impairment existed. Due to the fact that the market value of our reporting unit continues to approach book value, it is at least reasonably possible that we may be required to perform the impairment test at additional times during the remainder of the year and that we may find that we have to record a goodwill impairment charge in the near term.

*Stock-Based Compensation.* In accordance with SFAS 123R, *Share-Based Payment*, we estimate the fair value of share-based payments using the Black-Scholes option pricing model, which requires certain estimates, including an expected forfeiture rate and expected term of options granted. Management also makes decisions regarding the method of calculating expected volatilities and the risk-free interest rate used in the option-pricing model. The resulting calculated fair value of the share-based payment is recognized as compensation expense over the requisite service period, generally the vesting period. When there are any changes to the assumptions used in the option-pricing model, including fluctuations in market price of our common stock, there will be variations in calculated fair value of the share-based payments, causing variation in the compensation cost recognized.

*Income Taxes.* Deferred income taxes are provided for temporary differences between the amount of assets and liabilities for financial and tax reporting purposes. We record a valuation allowance to reduce our deferred tax assets to the amount that is more likely than not to be realized. Should we determine that we will be able to realize all or part of our net deferred tax asset in the future, an adjustment to the deferred tax asset would be credited to the statement of operations, goodwill or equity in the period such determination is made.

Tax contingency reserves are recorded to address potential exposures involving tax positions we have taken that could be challenged by taxing authorities. These potential exposures result from the varying applications of statutes, rules, regulations and interpretations. Our tax contingency reserves contain

[Table of Contents](#)

assumptions based on past experiences and judgments about potential actions by taxing jurisdictions. The ultimate resolution of these matters may be greater or less than the amount that we have accrued.

**Results of Operations**

The following table sets forth certain financial data for the periods indicated:

	Three Months Ended March 31,			
	2006		2005	
	Dollars	% of Revenue	Dollars	% of Revenue
Revenue, net	\$ 36,559	100.0%	\$ 40,261	100.0%
Cost of revenue	23,713	64.9	23,343	58.0
Impairment loss on acquired developed technology	21,330	58.3	—	—
Gross profit (loss)	(8,484)	(23.2)	16,918	42.0
Operating expenses:				
Research and development	15,693	42.9	9,453	23.5
Selling, general and administrative	10,004	27.4	7,072	17.6
Impairment loss on acquired intangible assets	1,753	4.8	—	—
Amortization of acquired intangible assets	333	0.9	122	0.3
Total operating expenses	27,783	76.0	16,647	41.3
Income (loss) from operations	(36,267)	(99.2)	271	0.7
Gain on repurchase of long-term debt, net	3,009	8.2	—	—
Interest income	1,324	3.6	1,715	4.3
Interest expense	(698)	(1.9)	(657)	(1.6)
Amortization of debt issuance costs	(171)	(0.5)	(177)	(0.4)
Interest and other income, net	3,464	9.5	881	2.2
Income (loss) before income taxes	(32,803)	(89.7)	1,152	2.9
Provision for income taxes	252	0.7	316	0.8
Net income (loss)	\$ (33,055)	(90.4)%	\$ 836	2.1%

Percentages may not add due to rounding.

**Revenue**

Revenue decreased \$3,702, or 9%, in the first quarter of 2006 compared to the first quarter of 2005. Revenue by market as a percentage of total revenue was as follows:

	Three Months Ended March 31,	
	2006	2005
Advanced television	38%	58%
Multimedia projector	38%	30%
Digital streaming media devices	14%	0%
LCD monitor	6%	8%
Other	4%	4%

## [Table of Contents](#)

### *Advanced Television*

Revenue in the advanced television market decreased as a percent of total revenue from the first quarter of 2005 to the first quarter of 2006. This decrease is primarily due to a decrease in units sold of 25%, a decrease in average selling prices of 21% and an increase in revenue in the both the multimedia projector and digital streaming media devices markets. Declines in average selling prices are characteristic of the industry and the markets we serve. As such, we expect declines to occur again in the future. However, we cannot predict when or how severe they will be.

For the second quarter of 2006, we expect revenue from the advanced television market to be down 20 to 25% from the first quarter of 2006. We expect advanced television revenue to increase sequentially in the third and fourth quarters of 2006 based on designs wins we currently have, stronger market-based seasonality and the anticipated ramp of our new products.

### *Multimedia Projector*

Revenue in the multimedia projector market increased as a percent of total revenue from the first quarter of 2005 to the first quarter of 2006. This increase is primarily due to an increase in units sold of 27% and a decrease in revenue from the advanced television market, partially offset by a decrease in average selling prices of 8% and an increase in revenue from the digital streaming media devices market. The increase in units sold is primarily due to an overall growth in the projector market. We did not experience any significant shift in the mix between polysilicon and DLP projectors.

We expect revenue from the multimedia projector market for the second quarter of 2006 to be down approximately 10% from the first quarter of 2006. Seasonally, the first quarter is the strongest for our Japan-based customers given their March 31 year ends. Also, we have many multimedia projector customers transitioning to our new projector products in the second quarter of 2006.

### *Digital Streaming Media Devices*

Revenue in the digital streaming media devices market resulted from our acquisition of Equator in June 2005. This market includes videoconferencing, set-top box, imaging, and other miscellaneous applications.

We do not expect any significant change in our digital streaming media devices revenue from the first quarter of 2006, and believe second quarter revenue for this market will approximate the first quarter. In April 2006, we initiated a plan whereby we will be integrating the Internet Protocol television (IPTV) elements of the Equator technology we acquired with our advanced television technology product developments. We will no longer pursue stand-alone digital media streaming markets that are not core to advanced television, but will continue to provide customers with existing products.

### *LCD Monitor*

Revenue in the LCD monitor market decreased as a percent of total revenue from the first quarter of 2005 to the first quarter of 2006. This is primarily due to our decision to focus on higher end products and to discontinue development of mainstream products for this market, rather than any particular industry dynamics.

We expect LCD monitor revenue to continue to decrease in future periods as we pursue opportunities in the LCD panel market.

## [Table of Contents](#)

### *Other*

Other revenue includes LCD panel revenue and revenue from small niche markets. During the three months ended March 31, 2006, we had nominal LCD panel revenue. In the future, we expect revenue from this developing market to grow as we are able to secure design wins. Revenue from small niche markets is not expected to be significant in the near future.

### Cost of revenue and gross profit

Cost of revenue includes purchased materials, assembly, test, labor, warranty expense, royalties, provisions for slow-moving and obsolete inventory, amortization of the fair value adjustment on acquired inventory, amortization of acquired developed technology, stock-based compensation and information technology and facilities allocations, as well as an impairment loss on acquired developed technology in 2006.

Gross margin in the first quarter of 2006 was (23.2%), compared to gross profit of 42.0% in the first quarter of 2005. The loss in the first quarter of 2006 is primarily due to the recognition of an impairment loss on acquired developed technology of \$21,330, as well as an increase in acquisition-related amortization, stock-based compensation, and provisions for slow-moving and obsolete inventory. In the first quarter of 2006, the impairment loss on acquired developed technology, amortization of developed technology and acquired inventory mark-up, stock-based compensation and provisions for excess and slow-moving inventory were \$25,227, or 69% of revenue, compared to amortization of developed technology of \$132, or .3% of revenue, in the first quarter of 2005.

Estimated amortization of acquired developed technology is \$4,087, \$2,820, \$2,820, \$2,336 and \$1,050 for the years ending December 31, 2006, 2007, 2008, 2009 and 2010, respectively.

The increase in the provision for slow-moving and obsolete inventory was primarily due to excess inventory on hand as of March 31, 2006. Additionally, warranty expense increased \$707 from the first quarter of 2005 to the first quarter of 2006.

We expect our gross profit to be between 39% and 42% in the second quarter of 2006.

### Research and development

Research and development expense includes compensation, including stock-based compensation and related costs for personnel, depreciation and amortization, fees for outside services, expensed equipment and information technology and facilities allocations.

Research and development expense increased \$6,240, or 66%, from the first quarter of 2005 to the first quarter of 2006 primarily due to the following:

- Compensation expense increased \$1,685 due to higher headcount in research and development personnel. As of March 31, 2006, we had 255 employees in research and development functions compared to 191 as of March 31, 2005. This increase was driven by an increase in our Shanghai design center and the acquisition of Equator in June 2005, offset by a reduction in Tualatin due to our restructuring initiated in October 2005.
- Stock-based compensation increased \$1,220 as a result of our adoption of SFAS 123R on January 1, 2006. Under FAS 123R, we fair value the options granted to employees using an option-pricing model and recognize stock-based compensation expense over the requisite service period, generally the

## Table of Contents

vesting period. Previously, stock-based compensation expenses was only recognized in the event options were granted at an exercise price less than the market price of our common stock on the date of grant.

- Depreciation and amortization expense increased \$1,064 due to investments in licensed technology and software.
- Facilities and information technology expenses allocated to research and development increased \$725 which was driven by increased compensation expense, increased rent expense, and increased depreciation expense.
- Outside services and non-recurring engineering and development expenses increased \$1,033 due to our product development efforts.

As a result of the restructuring plan announced on April 25, 2006, we anticipate annualized savings in 2006 to be approximately \$5,000, most of which will come from lower engineering expense over the remainder of the year.

### Selling, general and administrative

Selling, general and administrative expense includes compensation, including stock-based compensation, and related costs for personnel, travel, outside services, sales commissions, information technology and facilities allocations, and overhead incurred in our sales, marketing, customer support, management, legal and other professional and administrative support functions.

Selling, general and administrative expense increased \$2,932, or 41%, from the first quarter of 2005 to the first quarter of 2006 primarily due to the following:

- Compensation expense increased \$850 due to an increase in headcount in administrative and sales and marketing personnel. As of March 31, 2006, we had 188 employees in administrative, sales and marketing functions, compared to 166 employees as of March 31, 2005. The increase in headcount is primarily due to our acquisition of Equator in June 2005.
- Stock-based compensation expense increased \$1,507 due to our adoption of SFAS 123R on January 1, 2006.
- Facilities and information technology expenses allocated to selling, general and administrative increased \$392.

We expect selling, general and administrative expense to remain relatively flat for the duration of 2006, as we support the global expansion and scalability of our business systems.

### Impairment loss on acquired intangible assets

We recorded a customer relationships and a trademark asset in connection with the acquisition of Equator in June 2005. In the first quarter of 2006, we recorded an impairment loss on the customer relationships and trademark assets of \$1,753, which represents the excess of the carrying value over the estimated fair value of the assets. As of March 31, 2006, the new net book value of the customer relationships intangible asset is \$792, which will be amortized over its remaining useful life. The trademark asset was determined to have no remaining value.

## Table of Contents

### Amortization of acquired intangible assets

Amortization of acquired intangible assets includes amortization of the customer relationships and trademark assets we recorded in connection with the Equator acquisition, as well as amortization on an assembled workforce asset we recorded in connection with the Jaldi asset acquisition in September 2002. These acquired intangible assets are amortized on a straight line basis over the following useful lives: customer relationships, three years; trademark, one year; and assembled workforce, three years. As of December 31, 2005, the assembled workforce asset was fully amortized. Estimated amortization of acquired intangible assets is \$602, \$359 and \$164 for the years ending December 31, 2006, 2007 and 2008, respectively.

### Interest and other income, net

Interest and other income, net includes a gain on the repurchase of debentures, interest income earned on cash equivalents and short- and long-term marketable securities, interest expense related to our 1.75% debentures, and amortization of debt issuance costs which have been capitalized and are included in long-term assets in the condensed consolidated balance sheets.

Interest and other income, net increased \$2,583, or 293%, in the first quarter of 2006 compared to the first quarter of 2005. This increase is primarily due to the recognition of a gain of \$3,009 in the first quarter of 2006 related to the repurchase of \$10,000 of our 1.75% outstanding debentures, offset by a decrease in interest income of \$391, which resulted from the decrease in our average combined cash and cash equivalents and short- and long-term marketable securities balances during the first quarter of 2006 compared to the first quarter of 2005.

### Provision for income taxes

The provision for income taxes was \$252 for the first quarter of 2006, despite our loss before income taxes. The effective tax rate differs from the federal statutory rate primarily due to the generation of net operating loss and federal, state and foreign tax credit carryforwards, offset by the establishment of a valuation allowance against such carryforwards generated, and contingent amounts recorded related to potential exposures in foreign jurisdictions.

The provision for income taxes was \$316 for the first quarter of 2005. The effective tax rate differs from the federal statutory rate primarily due to the utilization of various federal, state and foreign tax credits, the accrual of contingent amounts related to potential exposures in foreign jurisdictions, and the establishment of a valuation allowance against credits generated in a foreign jurisdiction.

## **Liquidity and Capital Resources**

### Cash and cash equivalents and short- and long-term marketable securities

As of March 31, 2006, we had cash and cash equivalents of \$58,084, short- and long-term marketable securities of \$72,489 and working capital of \$128,273. Cash used in operations was \$1,366 for the three months ended March 31, 2006 compared to cash provided by operations of \$3,611 for the three months ended March 31, 2005. Cash used in operating activities for the first quarter of 2006 resulted primarily from the net loss incurred and increased payments made on accounts payable during the period, partially offset by decreases in accounts receivable and inventories balances. Cash provided by operating activities for the first quarter of 2005 resulted primarily from net income generated and a decrease in inventory

## Table of Contents

balances during the period, partially offset by decreases in accounts payable, accrued current and long-term liabilities and income taxes payable.

Cash used in investing activities was \$3,203 for the three months ended March 31, 2006 compared to cash provided by investing activities of \$13,512 for the three months ended March 31, 2005. Cash used in investing activities for the first quarter of 2006 consisted of payments on accrued balances related to asset purchases and purchases of marketable securities, partially offset by proceeds from maturities of marketable securities. Cash provided by investing activities in the first quarter of 2005 consisted of proceeds from maturities of marketable securities, partially offset by purchases of marketable securities, purchases of property and equipment and other assets, and payments on accrued balances related to asset purchases.

Cash used in financing activities was \$5,951 for the three months ended March 31, 2006 compared to cash provided by financing activities of \$834 for the three months ended March 31, 2005. Cash used in financing activities for the first quarter of 2006 included the repurchase of long-term debt, partially offset by proceeds from issuances of common stock from the exercise of stock options and through the employee stock purchase plan. Cash provided by financing activities for the first quarter of 2005 consisted of proceeds from the issuance of common stock from the exercise of stock options and through the employee stock purchase plan.

We anticipate that our existing cash and investment balances will be adequate to fund our operating and investing needs for the next twelve months and the foreseeable future. From time to time, we may evaluate acquisitions of businesses, products or technologies that compliment our business. Any such transaction, if consummated, may consume a material portion of our working capital or require the issuance of equity securities that may result in dilution to existing shareholders.

### Accounts receivable, net

Accounts receivable, net decreased to \$17,048 at March 31, 2006 from \$19,927 at December 31, 2005. This decrease is attributable to lower revenue during the three months ended March 31, 2006 compared to the three months ended December 31, 2005. Average days sales outstanding increased from 41 in the fourth quarter of 2005 to 42 in the first quarter of 2006.

### Inventories, net

Inventories, net decreased to \$23,579 as of March 31, 2006 from \$26,577 as of December 31, 2005. Inventory turnover on an annualized basis was approximately 4 as of March 31, 2006 and December 31, 2005, which represents approximately thirteen weeks of inventory.

## [Table of Contents](#)

### Contractual Payment Obligations

A summary of our contractual payment obligations as of March 31, 2006 was as follows:

Contractual Obligation	Payments Due By Period				
	Total	2006	2007 and 2008	2009 and 2010	2011 and beyond
Long-term debt	\$140,000	\$ —	\$ —	\$ —	\$ 140,000
Interest on long-term debt	13,475	2,450	4,900	4,900	1,225
Payments on accrued balances related to asset purchases	22,943	9,793	13,150	—	—
Estimated Q2 2006 purchase commitments to contract manufacturers	14,364	14,364	—	—	—
Operating leases	14,260	3,267	6,070	2,482	2,441

The lease payments above are net of sublease rentals of \$16 for 2006.

### Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that have or are reasonably likely to have a material current or future effect on our financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources.

### Recent Accounting Pronouncements

Not applicable.

### Item 3. Quantitative and Qualitative Disclosures about Market Risk.

Our primary market risk exposure is the impact of interest rate fluctuations on interest income earned on our investment portfolio. We mitigate risks associated with such fluctuations, as well as the risk of loss of principal, by investing in high-credit quality securities and limiting concentrations of issuers and maturity dates. Derivative financial instruments are not part of our investment portfolio.

As of March 31, 2006, we had convertible subordinated debentures of \$140,000 outstanding with a fixed interest rate of 1.75%. Interest rate changes affect the fair value of the debentures, but do not affect our earnings or cash flow.

All of our sales are denominated in U.S. dollars and as a result, we have relatively little exposure to foreign currency exchange risk with respect to our sales. We have employees located in offices in Canada, Japan, Taiwan and the People's Republic of China and as such, a portion of our operating expenses are denominated in foreign currencies. Accordingly, our operating results are affected by changes in the exchange rate between the U.S. dollar and those currencies. Any future strengthening of those currencies against the U.S. dollar could negatively impact our operating results by increasing our operating expenses as measured in U.S. dollars. While we cannot reasonably estimate the effect that an immediate 10% change in foreign currency exchange rates would have on our operating results or cash flows, we believe that the effect would not be material. We do not currently hedge against foreign currency rate fluctuations.

**Item 4. Controls and Procedures.**

Our management, under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of our disclosure controls and procedures as required by Exchange Act Rule 13a-15(d) as of the end of the period covered by this report. Based on that evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that these disclosure controls and procedures are effective. There were no changes in our internal control over financial reporting during the quarter ended March 31, 2006 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

**PART II – OTHER INFORMATION**

**Item 1A. Risk Factors.**

*Investing in our shares of common stock involves a high degree of risk. If any of the following risks occur, the market price of our shares of common stock could decline and investors could lose all or part of their investment.*

(Dollars in thousands, except per share data)

***We may not be able to implement our restructuring plan in a timely manner, or at all, and even if we do, the plan may not result in the anticipated benefits.***

Our April 2006 restructuring plan is designed to improve our breakeven point by reducing manufacturing overhead and operating expenses and focusing on our core business in advanced televisions. The plan involves the integration of Internet Protocol television (“IPTV”) technology that we acquired from Equator Technologies, Inc. (“Equator”) with our advanced television technology product developments, reduction of compensation expense, consolidation of office space, and reductions of other discretionary spending. The plan may take longer to implement than we expect, which could impact the timing and amount of anticipated benefits. In addition, unforeseen circumstances may result in our not being able to obtain the full benefits of the restructuring plan. Finally, our assumptions about benefits of the plan may prove incorrect or inaccurate, leading to a reduced benefit.

***We continue to face considerable business and financial risks related to our acquisition of Equator Technologies, Inc.***

We acquired Equator in June 2005 for an aggregate purchase price of \$118,116. The acquisition of Equator required a substantial expenditure and continues to involve substantial risks on our part. Equator’s product offerings and technological developments relate to internet protocol television (“IPTV”) set-top boxes, digital media appliances, videoconferencing devices and security devices. These are emerging technologies and the markets they serve are developing and largely untested, and we do not have direct experience developing and selling products into these markets.

The April 2006 restructuring plan includes integrating the IPTV technology that we acquired from Equator with our advanced television technology developments. In addition, the plan provides that we will no longer pursue stand-alone digital media streaming markets that are not core to advanced television. As a result, we may not be able to retain certain of Equator’s customers. We also may lose key employees who have knowledge and understanding of the Equator technology and the IPTV market and technology in general. That may make it more difficult to integrate the Equator technology with our own and that combination of technology may not result in products that help to increase our sales or market share in any given market.

## [Table of Contents](#)

***We may be unable to successfully integrate Equator Technologies, Inc., and any future acquisition or equity investment we make could disrupt our business and severely harm our financial condition.***

We may not be able to successfully integrate businesses, products, technologies or personnel of Equator, or of any other entity that we might acquire in the future, and any failure to do so could disrupt our business and seriously harm our financial condition. In addition, if we acquire companies with weak internal controls, it will take time to get the acquired company up to the same level of operating effectiveness as Pixelworks and to implement adequate internal control, management, financial and operating reporting systems. Our inability to address these risks could negatively affect our operating results.

To date, we have acquired Panstera, Inc. in January 2001, nDSP in January 2002, Jaldi Semiconductor in September 2002 and Equator in June 2005. In March 2003, we announced the execution of a definitive merger agreement with Genesis Microchip, Inc.; however, the merger was terminated in August of 2003, and we incurred \$8,949 of expenses related to the transaction. In the third quarter of 2003, we made an investment of \$10,000 in Semiconductor Manufacturing International Corporation (SMIC). We intend to continue to consider investments in or acquisitions of complementary businesses, products or technologies.

The acquisitions of Equator, Panstera, nDSP and Jaldi contained a very high level of risk primarily because the investments were made based on in-process technological development that may not have been completed, or if completed, may not have become commercially viable.

These and any future acquisitions and investments could result in:

- issuance of stock that dilutes current shareholders' percentage ownership;
- incurrence of debt;
- assumption of liabilities;
- amortization expenses related to other intangible assets;
- impairment of goodwill;
- large and immediate write-offs; or
- decrease in cash that could otherwise serve as working capital.

Our operation of any acquired business will also involve numerous risks, including, but not limited to:

- problems combining the acquired operations, technologies or products;
- unanticipated costs;
- diversion of management's attention from our core business;
- adverse effects on existing business relationships with customers;
- risks associated with entering markets in which we have no or limited prior experience; and
- potential loss of key employees, particularly those of the acquired organizations.

***Goodwill represents a significant portion of our total assets.***

As of March 31, 2006, goodwill amounted to \$133,739, or approximately 36% of our total assets. We are required to review goodwill for possible impairment on an annual basis or when events and circumstances arise which indicate a possible impairment. The review of goodwill for impairment may result in large write-offs of goodwill, which could have a material adverse effect on our results of operations. Because the

fact that the market value of our reporting unit is approaching book value, it is at least reasonably possible that we may have an impairment in the near term.

***The year ended December 31, 2004 was our only year of profitability since inception and we may be unable to achieve profitability in future periods.***

The year ended December 31, 2004 was our first, and only, year of profitability since inception, during which we generated net income of \$21,781. Since then, we have incurred a net loss of \$33,055 and \$42,610 for the three months ended March 31, 2006 and the year ended December 31, 2005, respectively, and our accumulated deficit through March 31, 2006 is \$135,253. Accordingly, we announced a restructuring plan on April 25, 2006, to significantly improve the breakeven point by reducing manufacturing overhead and operating expenses and focusing on our core business. The plan includes integrating the Internet Protocol television (IPTV) elements of the Equator acquisition with our advanced television technology developments, and is no longer pursuing other stand-alone digital media streaming markets that are not core to advanced television. In addition, the plan also contemplates continuing to make critical infrastructure investments in people, processes and tools to improve our time to market on new product designs. As a result, we expect to incur restructuring charges totaling between \$1,600 and \$3,500 over the second and third quarters of 2006. Approximately \$1,000 to \$2,500 of the restructuring charge will be recognized in the second quarter as a result of a reduction in workforce related costs, and \$600 to \$1,000 will be recognized in the third quarter as office space is vacated. The anticipated savings in 2006 are expected to be approximately \$5,000 with net annualized savings of approximately \$9,000. We cannot cut our way to market leadership. We must continue to make the essential infrastructure investments to improve our time to market with innovative product designs that will grow revenue and margins as we launch new products. We cannot be certain that we will achieve profitability in the future or, if we do, that we can sustain or increase profitability on a quarterly or annual basis. This may in turn cause the price of our common stock to decline. In addition, if we are not profitable in the future, we may be unable to continue our operations.

***Changes in stock-based compensation accounting rules have adversely impacted our operating results and may adversely impact our stock price.***

In December 2004, the Financial Accounting Standards Board issued SFAS 123R. SFAS 123R requires all share-based payments to employees, including grants of employee stock options, to be accounted for at fair value and expensed over the service period for financial reporting purposes. SFAS 123R no longer allows the provision of pro forma disclosure previously used as an alternative to financial statement recognition.

We were required to adopt SFAS 123R in the first quarter of 2006. Under SFAS 123R, we applied the Black-Scholes valuation model in determining the fair value of share-based payments, with adjustments to the methodology in accordance with SFAS 123R. As a result, our operating results for the first quarter of 2006 contain, and our operating results for future periods will contain, a charge for share-based compensation related to stock options and ESPP shares. SFAS 123R had a significant impact on our reported operating results for the first quarter of fiscal 2006, with SFAS 123R charges of \$2,800, and we expect the adoption of SFAS 123R will continue to have a significant adverse impact on our reported operating results in the future. We cannot predict the effect that this adverse impact on our reported operating results will have on the trading price of our common stock.

***Decreased effectiveness of share-based payment awards could adversely affect our ability to attract and retain employees.***

We have historically used stock options and other forms of share-based payment awards as key components of our total rewards employee compensation program in order to retain employees and provide competitive compensation and benefit packages. In accordance with SFAS 123R, we began recording charges to earnings for stock-based compensation expense in the first quarter of 2006. As a result, we will incur increased compensation costs associated with our stock-based compensation programs making it more expensive for us to grant share-based payment awards to employees in the future. We are in the process of reviewing our equity compensation strategy in light of the current regulatory and competitive environment and considering changes to the program whereby we reduce the total number of options granted to employees and the number of employees who receive share-based payment awards. In addition, to the extent that SFAS 123R makes it more expensive to grant stock options or to continue to have an employee stock purchase program, we may decide to incur increased cash compensation costs in the future. Actions that we take to reduce stock-based compensation expense that might be more aggressive than actions implemented by our competitors, could make it difficult to attract, retain and motivate employees, which could adversely affect our competitive position as well as our business and operating results.

## [Table of Contents](#)

***If the proposed 2006 Stock Option Plan is not approved by our shareholders we may incur increased compensation costs and find it difficult to attract, retain and motivate employees, which could materially and adversely affect our business.***

Our ability to continue to attract, motivate and retain highly qualified employees, directors and consultants is highly dependent on our compensation program. Like the compensation programs of our competitors, our program includes long-term incentives relating to stock ownership because such incentives encourage recipients to more closely align their interests with those of the shareholders by relating compensation to increases in shareholder value. Our 1997 Stock Option Plan will expire on January 15, 2007. Regulations implemented by the NASDAQ National Market require shareholder approval for all stock option plans. As a result of these regulations, our ability to grant stock options to employees after our 1997 Stock Option Plan expires will be severely limited to the shares available for grant under our 2001 Nonqualified Stock Option Plan, 655,890 shares as of March 31 2006, unless our stockholders approve a new plan as proposed at our 2006 annual meeting. If a new stock option plan is not approved, we may incur increased compensation costs, be required to change our equity compensation strategy or find it difficult to attract, retain and motivate employees, each of which could materially and adversely affect our business.

***Fluctuations in our quarterly operating results make it difficult to predict our future performance and may result in volatility in the market price of our common stock.***

Our quarterly operating results have varied from quarter to quarter and are likely to vary in the future based on a number of factors related to our industry and the markets for our products. Some of these factors are not in our control and any of them may cause the price of our common stock to fluctuate. These factors include, but are not limited to:

- fluctuations in implementing our current restructuring plans, or similar plans we may adopt in the future;
- variations in manufacturing yields achieved;
- our success in integrating the operations of our recently acquired subsidiary, Equator;
- demand for multimedia projectors, advanced televisions, LCD panel products, and digital streaming media devices;
- demand for our products and the timing of orders for our products;
- the deferral of customer orders in anticipation of new products or product enhancements from us or our competitors or due to a reduction in our end customers' demand;
- the loss of one or more of our key distributors or customers or a reduction, delay or cancellation of orders from one or more of these parties;
- changes in the available production capacity at the semiconductor fabrication foundries that manufacture our products and changes in the costs of manufacturing;
- our ability to provide adequate supplies of our products to customers and avoid excess inventory;
- the announcement or introduction of products and technologies by our competitors;
- changes in product mix, product costs or pricing, or distribution channels; and
- general economic conditions and economic conditions specific to the advanced display and semiconductor markets.

These factors are difficult or impossible to forecast, and these or other factors could seriously harm our business. We anticipate the rate of new orders may vary significantly from quarter to quarter.

Our operating expenses and inventory levels are based on our expectations of future revenues and our operating expenses are relatively fixed in the short term. Consequently, if anticipated sales and shipments in any quarter do not occur when expected, operating expenses and inventory levels could be disproportionately high, and our operating results for that quarter and, potentially, future quarters may be negatively impacted. Any shortfall in our revenues would have a direct impact on our business. In addition, fluctuations in our quarterly results could adversely affect the price of our common stock in a manner unrelated to our long-term operating performance. Because our operating results are volatile and difficult to predict, you should not rely on the results of one quarter as an indication of our future performance. It is possible that in some future quarter our operating results will fall below the expectations of securities analysts and investors. In this event, the price of our common stock may decline significantly.

***Our products are characterized by average selling prices that decline over relatively short time periods, which will negatively affect financial results unless we are able to reduce our product costs or introduce new products with higher average selling prices.***

Average selling prices for our products decline over relatively short periods of time, while many of our product costs are fixed. When our average selling prices decline, our gross profit declines unless we are able to sell more units or reduce the cost to manufacture our products. Our operating results are negatively affected when revenue or gross profit margin declines. We have experienced these results and expect that we will continue to experience them in the future, although we cannot predict when they may occur or how severe they will be.

***Our highly integrated products and high-speed mixed signal products are difficult to manufacture without defects and the existence of defects could result in an increase in our costs and delays in the availability of our products.***

The manufacture of semiconductors is a complex process and it is often difficult for semiconductor foundries to produce semiconductors free of defects. Because many of our products are more highly integrated than other semiconductors and incorporate mixed analog and digital signal processing and embedded memory technology, they are even more difficult to produce without defects.

The ability to manufacture products of acceptable quality depends on both product design and manufacturing process technology. Since defective products can be caused by design or manufacturing difficulties, identifying quality problems can occur only by analyzing and testing our semiconductors in a system after they have been manufactured. The difficulty in identifying defects is compounded because the process technology is unique to each of the multiple semiconductor foundries we contract with to manufacture our products. Failure to achieve defect-free products due to their increasing complexity may result in an increase in our cost and delays in the availability of our products. For example, we have experienced field failures of our semiconductors in certain customer system applications that required us to institute additional semiconductor level testing. As a result of these field failures, we incurred costs due to customers returning potentially affected products. Additionally, customers have experienced delays in receiving product shipments from us that resulted in the loss of revenue and profits. Shipment of defective products may also harm our reputation with customers.

***If we do not achieve additional design wins in the future, our ability to grow would be seriously limited.***

Our future success depends on developers of advanced display products designing our products into their systems. To achieve design wins, we must define and deliver cost-effective, innovative and integrated semiconductors. Once a supplier's products have been designed into a system, the developer may be reluctant to change its source of components due to the significant costs associated with qualifying a new supplier. Accordingly, the failure on our part to obtain additional design wins with leading branded manufacturers or integrators, and to successfully design, develop and introduce new products and product enhancements could harm our business, financial condition and results of operations.

Achieving a design win does not necessarily mean that a developer will order large volumes of our products. A design win is not a binding commitment by a developer to purchase our products. Rather, it is a decision by a developer to use our products in the design process of that developer's products. Developers can choose at any time to discontinue using our products in their designs or product development efforts. If our products are chosen to be incorporated into a developer's products, we may still not realize significant revenues from that developer if that developer's products are not commercially successful or if that developer chooses to qualify a second source.

## [Table of Contents](#)

***Because of the complex nature of our semiconductor designs and of the associated manufacturing process and the rapid evolution of our customers' product designs, we may not be able to develop new products or product enhancements in a timely manner, which could decrease customer demand for our products and reduce our revenues.***

The development of our semiconductors, some of which incorporate mixed analog and digital signal processing, is highly complex. These complexities require that we employ advanced designs and manufacturing processes that are unproven. We have experienced increased development time and delays in introducing new products that resulted in significantly less revenue than originally expected for those products. We will not always succeed in developing new products or product enhancements nor will we always do so in a timely manner. Acquisitions have significantly added to the complexity of our product development efforts. We must now coordinate very complex product development programs between multiple geographically dispersed locations.

Many of our designs involve the development of new high-speed analog circuits that are difficult to simulate and that require physical prototypes not required by the primarily digital circuits we currently design. The result could be longer and less predictable development cycles.

Successful development and timely introduction of new or enhanced products depends on a number of other factors, including, but not limited to:

- accurate prediction of customer requirements and evolving industry standards, including video decoding, digital interface and content piracy protection standards;
- development of advanced display technologies and capabilities;
- timely completion and introduction of new product designs;
- use of advanced foundry processes and achievement of high manufacturing yields; and
- market acceptance of the new products.

If we are not able to successfully develop and introduce our products in a timely manner, our business and results of operations will be adversely affected.

***In recent years, various state, federal and international governments have enacted laws and regulations governing the collection, treatment, recycling and disposal of certain materials used in the manufacturing of electrical and electronic components. We will incur significant expenditures to comply with these laws and regulations and we may incur additional capital expenditures and asset impairments to ensure that our products and our vendor's products are in compliance with these regulations. In addition, we would be subject to significant penalties for failure to comply with these laws and regulations.***

We are subject to numerous environmental laws and regulations. Compliance with current or future environmental laws and regulations could require us to incur substantial expenses which could harm our business, financial condition and results of operation. For example, the European Parliament has finalized the Restriction on Use of Hazardous Substances Directive, or RoHS Directive, which restricts the sale of new electrical and electronic equipment containing certain hazardous substances, including lead. We are working to modify our products to eliminate lead from products we put on the market by July 1, 2006 as required by the RoHS Directive. Failure to comply with such legislation could result in our customers refusing to purchase our products and subject us to significant monetary penalties in connection with a violation, both of which could have a materially adverse effect on our business, financial condition and results from operations. The European Parliament has also recently finalized the Waste Electrical and Electronic Equipment Directive, or WEEE Directive, which makes producers of electrical

## [Table of Contents](#)

and electronic equipment financially responsible for specified collection, recycling, treatment and disposal of past and future covered products. These environmental laws and regulations could become more stringent over time, imposing even greater compliance costs and increasing risks and penalties associated with violations, which could seriously harm our business, financial condition and results of operation. There can be no assurance that violations of environmental laws or regulations will not occur in the future as a result of the inability to obtain permits, human error, equipment failure or other causes.

### ***Integration of software in our products adds complexity and cost that may affect our ability to achieve design wins and may affect our profitability.***

Our products incorporate software and software development tools. The integration of software adds complexity, may extend our internal development programs and could impact our customers' development schedules. This complexity requires increased coordination between hardware and software development schedules and may increase our operating expenses without a corresponding increase in product revenue. Some customers and potential customers may choose not to use our products because of the additional requirements of implementing our software, preferring to use a product that works with their existing software. This additional level of complexity lengthens the sales cycle and may result in customers selecting competitive products requiring less software integration.

### ***A significant amount of our revenue comes from a few customers and distributors. Any decrease in revenues from, or loss of, any of these customers or distributors could significantly reduce our total revenues.***

We are, and will continue to be, dependent on a limited number of large distributors and customers for a substantial portion of our revenue. Sales to distributors represented 42% of total revenue for the three months ended March 31, 2006, and 46%, 69% and 69% of total revenue for the years ended December 31, 2005, 2004 and 2003, respectively. Sales to Tokyo Electron Device, or TED, our Japanese distributor, represented 21% of total revenue for the three months ended March 31, 2006, and 22%, 31% and 39% of total revenue for the years ended December 31, 2005, 2004 and 2003, respectively. Revenue attributable to our top five end customers represented 35% of total revenue for the three months ended March 31, 2006, and 34%, 33% and 35% of total revenue for the years ended December 31, 2005, 2004 and 2003, respectively. As a result of these distributor and end customer concentrations, any one of the following factors could significantly impact our revenues:

- a significant reduction, delay or cancellation of orders from one or more of our key distributors, branded manufacturers or integrators; or
- a decision by one or more significant end customers to select products manufactured by a competitor, or its own internally developed semiconductor, for inclusion in future product generations.

The display manufacturing market is highly concentrated among relatively few large manufacturers. We expect our operating results to continue to depend on revenues from a relatively small number of customers.

### ***The concentration of our accounts receivable with a limited number of customers exposes us to increased credit risk and could harm our operating results and cash flows.***

As of March 31, 2006 and December 31, 2005, we had two and three customers, respectively, that each represented more than 10% of accounts receivable. TED represented 15% and 16% of our accounts receivable balance as of March 31, 2006 and December 31, 2005, respectively. The failure of TED to pay this balance or any other customer to pay their outstanding balance, would result in an operating expense, which would increase our operating expenses and reduce our cash flows.

## [Table of Contents](#)

***International sales account for almost all of our revenue, and if we do not successfully address the risks associated with our international operations, our revenue could decrease.***

Sales outside the U.S. accounted for approximately 93% of total revenue for the three months ended March 31, 2006, and 96%, 99% and 99% of total revenue in 2005, 2004 and 2003, respectively. We anticipate that sales outside the U.S. will continue to account for a substantial portion of our revenue in future periods. In addition, customers who incorporate our products into their products sell a substantial portion outside of the U.S., thereby exposing us indirectly to further international risks. In addition, all of our products are manufactured outside of the U.S. We are, therefore, subject to many international risks, including, but not limited to:

- increased difficulties in managing international distributors and manufacturers of our products and components due to varying time zones, languages and business customs;
- foreign currency exchange fluctuations such as the devaluation in the currencies of Japan, People's Republic of China ("PRC"), Taiwan and Korea that could result in an increased cost of procuring our semiconductors;
- potentially adverse tax consequences;
- difficulties regarding timing and availability of export and import licenses, which have limited our ability to freely move demonstration equipment and samples in and out of Asia;
- political and economic instability, particularly in the PRC, Japan, Taiwan, Korea and Turkey;
- reduced or limited protection of our intellectual property, significant amounts of which are contained in software, which is more prone to design piracy;
- increased transaction costs related to sales transactions conducted outside of the U.S., such as charges to secure letters of credit for foreign receivables;
- difficulties in maintaining sales representatives outside of the U.S. that are knowledgeable about our industry and products;
- changes in the regulatory environment in the PRC, Japan, Taiwan, Korea and Turkey that may significantly impact purchases of our products by our customers;
- outbreaks of SARS, bird flu or other pandemics in the PRC or other parts of Asia; and
- difficulties in collecting accounts receivable.

***Our growing presence and investment within the Peoples Republic of China subjects us to risks of economic and political instability in the area, which could adversely impact our results of operations.***

A substantial and potentially increasing portion of our products are manufactured by foundries located in the PRC and a large number of our customers are geographically concentrated in the PRC. In addition, approximately 47% of our employees are located in this area and we made an investment of \$10,000 in SMIC, located in Shanghai, China in the third quarter of 2003. Disruptions from natural disasters, health epidemics (including new outbreaks of SARS or bird flu) and political, social and economic instability may affect the region, and would have a negative impact on our results of operations. In addition, the economy of the PRC differs from the economies of many countries in respects such as structure, government involvement, level of development, growth rate, capital reinvestment, allocation of resources, self-sufficiency, rate of inflation and balance of payments position, among others. In the past, the economy of the PRC has been primarily a planned economy subject to state plans. Since the entry of the PRC into the World Trade Organization in 2002, the PRC government has been reforming its economic and political systems. These reforms have resulted in significant economic growth and social change. We cannot assure, however, that the PRC's policies for economic reforms will be consistent or effective. Our results of operations and financial position may be harmed by changes in the PRC's political, economic or social conditions.

***Our dependence on selling through distributors and integrators increases the complexity of managing our supply chain and may result in excess inventory or inventory shortages.***

Selling through distributors and integrators reduces our ability to forecast sales and increases the complexity of our business. Since our distributors act as intermediaries between us and the companies using our products, we must rely on our distributors to accurately report inventory levels and production forecasts. Some of our products are sold to integrators, who then integrate our semiconductors into a system that is then sold to an original equipment manufacturer or “OEM.” This adds another layer between us and the ultimate source of demand for our products, the consumer. These arrangements require us to manage a more complex supply chain and monitor the financial condition and creditworthiness of our distributors, integrators and customers. Our failure to manage one or more of these challenges could result in excess inventory or shortages that could seriously impact our operating revenue or limit the ability of companies using our semiconductors to deliver their products.

***Dependence on a limited number of sole-source, third-party manufacturers for our products exposes us to shortages based on capacity allocation or low manufacturing yield, errors in manufacturing, price increases with little notice, volatile inventory levels and delays in product delivery, which could result in delays in satisfying customer demand, increased costs and loss of revenues.***

We do not own or operate a semiconductor fabrication facility and we do not have the resources to manufacture our products internally. We rely on third-party foundries for wafer fabrication and other contract manufacturers for assembly and testing of our products. Our requirements represent only a small portion of the total production capacity of our contract manufacturers. Our third-party manufacturers have in the past re-allocated capacity to other customers even during periods of high demand for our products. We expect that this may occur again in the future. We have limited control over delivery schedules, quality assurance, manufacturing yields, potential errors in manufacturing and production costs. We do not have long-term supply contracts with our third-party manufacturers so they are not obligated to supply us with products for any specific period of time, in any specific quantity or at any specific price, except as may be provided in a particular purchase order. From time to time, our third-party manufacturers increase prices charged to manufacture our products with little notice. This requires us to either increase the price we charge for our products or suffer a decrease in our gross margins. We try not to maintain substantial inventories of products, but need to order products well in advance of receiving firm purchase orders for those products which could result in excess inventory or inventory shortages.

If we are unable to obtain our products from manufacturers on schedule, our ability to satisfy customer demand will be harmed, and revenue from the sale of products may be lost or delayed. If orders for our products are cancelled, expected revenues would not be realized. In addition, if the price charged by our third-party manufacturers increases we will be required to increase our prices, which could harm our competitiveness. For example, in the fourth quarter of 2005, one of our third-party manufacturers experienced temporary manufacturing delays due to unexpected process problems, which caused delays in delivery of our products making it difficult for us to satisfy our customer demand.

***The concentration of our manufacturers and customers in the same geographic region increases our risk that a natural disaster, labor strike or political unrest could disrupt our operations.***

Most of our current manufacturers and customers are located in the PRC, Japan, Korea and Taiwan. The risk of earthquakes in the Pacific Rim region is significant due to the proximity of major earthquake fault lines in the area. Common consequences of earthquakes include power outages and disruption and/or impairment of production capacity. Earthquakes, fire, flooding, power outages and other natural disasters in the Pacific Rim region, or political unrest, labor strikes or work stoppages in countries where our manufacturers and customers are located likely would result in the disruption of our manufacturers’ and customers’ operations. Any disruption resulting from extraordinary events could cause significant delays in shipments of our products until we are able to shift our manufacturing from the affected contractor to another third-party vendor. There can be no assurance that alternative capacity could be obtained on favorable terms, if at all.

## [Table of Contents](#)

***We use a customer owned tooling, or COT, process for manufacturing some of our products which exposes us to the possibility of poor yields and unacceptably high product costs.***

We are building many of our products on a customer owned tooling basis, also known in the semiconductor industry as COT, where we directly contract the manufacture of wafers and assume the responsibility for the assembly and testing of our products. As a result, we are subject to increased risks arising from wafer manufacturing yields and risks associated with coordination of the manufacturing, assembly and testing process. Poor product yields would result in higher product costs, which could make our products uncompetitive with products offered by our competitors if we chose to increase our prices, or could result in low gross profit margins if we did not increase our prices.

***We are dependent on our foundries to implement complex semiconductor technologies, which could adversely affect our operations if those technologies are unavailable, delayed or inefficiently implemented.***

In order to increase performance and functionality and reduce the size of our products, we are continuously developing new products using advanced technologies that further miniaturize semiconductors. However, we are dependent on our foundries to develop and provide access to the advanced processes that enable such miniaturization. We cannot be certain that future advanced manufacturing processes will be implemented without difficulties, delays or increased expenses. Our business, financial condition and results of operations could be materially and adversely affected if advanced manufacturing processes are unavailable to us, substantially delayed or inefficiently implemented.

***Manufacturers of our semiconductor products periodically discontinue manufacturing processes, which could make our products unavailable from our current suppliers.***

Semiconductor manufacturing technologies change rapidly and manufacturers typically discontinue older manufacturing processes in favor of newer ones. Once a manufacturer makes the decision to retire a manufacturing process, notice is generally given to its customers. Customers will then either retire the affected part or develop a new version of the part that can be manufactured on the newer process. In the event that a manufacturing process is discontinued, our products could become unavailable from our current suppliers. Additionally, migrating to a new, more advanced process requires significant expenditures for research and development. A significant portion of our products use embedded DRAM technology and the required manufacturing processes will only be available for a limited time. We also utilize 0.18um, 0.15um and 0.13um standard logic processes, which may only be available for the next five to seven years. We have commitments from our suppliers to notify us in the event of a discontinuance of a manufacturing process in order to assist us with product transitions.

***If we have to qualify a new contract manufacturer or foundry for any of our products, we may experience delays that result in lost revenues and damaged customer relationships.***

None of our products are fabricated by more than one supplier. Additionally, our products require manufacturing with state-of-the-art fabrication equipment and techniques. Because the lead-time needed to establish a relationship with a new contract manufacturer is at least nine months, and the estimated time for us to adapt a product's design to a particular contract manufacturer's process is at least four months, there is no readily available alternative source of supply for any specific product. This could cause significant delays in shipping products, which may result in lost revenues and damaged customer relationships.

## [Table of Contents](#)

***Our future success depends upon the continued services of key personnel, many of whom would be difficult to replace and the loss of one or more of these employees could seriously harm our business by delaying product development.***

Our future success depends upon the continued services of our executive officers, key hardware and software engineers, and sales, marketing and support personnel, many of whom would be difficult to replace. The loss of one or more of these employees, particularly Allen Alley, our President and Chief Executive Officer, could seriously harm our business. In addition, because of the highly technical nature of our business, the loss of key engineering personnel could delay product introductions and significantly impair our ability to successfully create future products. We believe our success depends, in large part, upon our ability to identify, attract and retain qualified hardware and software engineers, and sales, marketing, finance and managerial personnel. Competition for talented personnel is intense and we may not be able to retain our key personnel or identify, attract or retain other highly qualified personnel in the future. We have experienced, and may continue to experience, difficulty in hiring and retaining employees with appropriate qualifications. If we do not succeed in hiring and retaining employees with appropriate qualifications, our product development efforts, revenues and business could be seriously harmed.

***Because we do not have long-term commitments from our customers, and plan purchases based on estimates of customer demand which may be inaccurate, we must contract for the manufacture of our products based on those potentially inaccurate estimates.***

Our sales are made on the basis of purchase orders rather than long-term purchase commitments. Our customers may cancel or defer purchase orders at any time. This process requires us to make multiple demand forecast assumptions, each of which may introduce error into our estimates. If our customers or we overestimate demand, we may purchase components or have products manufactured that we may not be able to use or sell. As a result, we would have excess inventory, which would negatively affect our operating results. Conversely, if our customers or we underestimate demand or if sufficient manufacturing capacity is unavailable, we would forego revenue opportunities, lose market share and damage our customer relationships.

***Development projects may cause us to incur substantial operating expenses without the guarantee of any associated revenue or far in advance of revenue.***

We have development projects that consume large amounts of engineering resources far in advance of product revenue. Our work under these projects is technically challenging and places considerable demands on our limited resources, particularly on our most senior engineering talent, and may not result in revenue for twelve to eighteen months, if at all. In addition, allocating significant resources to these projects may detract from or delay the completion of other development projects. Any of these development projects could be canceled at any time without notice. These factors could have a material and adverse effect on our long-term business and results of operations.

***Because of our long product development process and sales cycle, we may incur substantial expenses before we earn associated revenues and may not ultimately sell as many units of our products as we forecasted.***

We develop products based on anticipated market and customer requirements and incur substantial product development expenditures, which can include the payment of large up-front, third-party license fees and royalties, prior to generating associated revenues. Because the development of our products incorporates not only our complex and evolving technology, but also our customers' specific requirements, a lengthy sales process is often required before potential customers begin the technical evaluation of our products. Our customers typically perform numerous tests and extensively evaluate our products before incorporating them into their systems. The time required for testing, evaluation and design of our products into a customer's equipment can take up to nine months or more. It can take an additional nine months before a customer commences volume shipments of systems that incorporate our products. Even when we achieve a design win, the customer may never ship systems incorporating our products. We cannot assure that the time required for the testing, evaluation and design of our products by our customers would not exceed nine months. Because of this lengthy development cycle, we will experience delays between the time we incur expenditures for research and development, sales and marketing, inventory levels and the time we generate revenues, if any, from these expenditures. Additionally, if actual sales volumes for a particular product are substantially less than originally forecasted, we may experience large write-offs of capitalized license fees, product masks or other capitalized or deferred product-related costs that would negatively affect our operating results.

***Shortages of other key components for our customers' products could delay our ability to sell our products.***

Shortages of components and other materials that are critical to the design and manufacture of our customers' products could limit our sales. These components include liquid crystal display panels and other display components, analog-to-digital converters, digital receivers and video decoders. During 2000, some of our customers experienced delays in the availability of key components from other suppliers, which, in turn, caused a delay in demand for the products that we supplied to our customers.

***Shortages of materials used in the manufacturing of our products may increase our costs or limit our revenues and impair our ability to ship our products on time.***

From time to time, shortages of materials that are used in our products may occur. In particular, we may experience shortages of semiconductor wafers and packages. If material shortages occur, we may incur additional costs or be unable to ship our products to our customers in a timely fashion, both of which could harm our business and negatively impact our earnings.

***Our products could become obsolete if necessary licenses of third-party technology are not available to us or are only available on terms that are not commercially viable.***

We license technology from third parties that is incorporated into our products or product enhancements. Future products or product enhancements may require additional third-party licenses that may not be available to us or on terms that are commercially reasonable. If we are unable to obtain any third-party license required to develop new products and product enhancements, we may have to obtain substitute technology of lower quality or performance standards or at greater cost, either of which could seriously harm the competitiveness of our products. We currently have access to certain key technology, owned by independent third parties, through license agreements. In the event of a change in control at the licensor, it may become difficult to attain access to such licensed technology.

***We may not be able to respond to the rapid technological changes in the markets in which we compete, or we may not be able to comply with industry standards in the future making our products less desirable or obsolete.***

The markets in which we compete or seek to compete are subject to rapid technological change, frequent new product introductions, changing customer requirements for new products and features, and evolving industry standards. The introduction of new technologies and the emergence of new industry standards could render our products less desirable or obsolete, which could harm our business. Examples of changing industry standards include the introduction of high-definition television (ATSC and DVB), or HDTV, new video decoding technology (such as H.264 or Windows Media 9), new digital receivers and displays with resolutions that have required us to accelerate development of new products to meet these new standards.

***Our software development tools may be incompatible with industry standards and challenging to implement, which could slow product development or cause us to lose customers and design wins.***

Our existing products incorporate complex software tools designed to help customers bring products into production. Software development is a complex process and we are dependent on software development languages and operating systems from vendors that may compromise our ability to design software in a timely manner. Also, software development is a volatile market and new software languages are introduced to the market that may be incompatible with our existing systems and tools. New software development languages may not be compatible with our own, requiring significant engineering efforts to migrate our existing systems in order to be compatible with those new languages. Existing or new software development tools could make our current products obsolete or hard to use. Software development disruptions could slow our product development or cause us to lose customers and design wins.

***Our integrated circuits and software could contain defects, which could reduce sales of those products or result in claims against us.***

Despite testing by both our customers and us, errors or performance problems may be found in existing or new semiconductors and software. This could result in a delay in the recognition or loss of revenues, loss of market share or failure to achieve market acceptance. These defects may cause us to incur significant warranty, support and repair costs, and could also divert the attention of our engineering personnel from our product development efforts and harm our relationships with our customers. The occurrence of these problems could result in the delay or loss of market acceptance of our semiconductors and would likely harm our business. Defects, integration issues or other performance problems in our semiconductors and software could result in financial or other damages to our customers or could damage market acceptance of our products. Our customers could also seek damages from us for their losses. A product liability claim brought against us, even if unsuccessful, would likely be time consuming and costly to defend.

***Others may bring infringement actions against us that could be time consuming and expensive to defend.***

We may become subject to claims involving patents or other intellectual property rights. For example, in early 2000, we were notified by InFocus Corporation ("InFocus") that we were infringing on patents held by InFocus. In February 2000, we entered into a license agreement with InFocus granting us the right to use the technology covered by those InFocus patents. As a result, we recorded a charge of \$4,078 for patent settlement expense in the first quarter of 2000. Intellectual property claims could subject us to significant liability for damages and invalidate our proprietary rights. In addition, intellectual property claims may be brought against customers that incorporate our products in the design of their own products. These claims, regardless of their success or merit and regardless of whether we are named as defendants in a lawsuit, would likely be time consuming and expensive to resolve and would divert the time and attention of management and technical personnel. Any future intellectual property litigation or claims also could force us to do one or more of the following:

- stop selling products using technology that contains the allegedly infringing intellectual property;
- attempt to obtain a license to the relevant intellectual property, which may not be available on reasonable terms or at all;
- attempt to redesign those products that contain the allegedly infringing intellectual property; and
- pay damages for past infringement claims that are determined to be valid or which are arrived at in settlement of such litigation or threatened litigation.

If we are forced to take any of the foregoing actions, we may be unable to manufacture and sell our products, which could seriously harm our business. In addition, we may not be able to develop, license or acquire non-infringing technology under reasonable terms. These developments could result in an inability to compete for customers or could adversely affect our results of operations.

***Our limited ability to protect our intellectual property and proprietary rights could harm our competitive position by allowing our competitors to access our proprietary technology and to introduce similar products.***

Our ability to compete effectively with other companies will depend, in part, on our ability to maintain the proprietary nature of our technology, including our semiconductor designs and software. We rely on a combination of patent, copyright, trademark and trade secret laws, as well as nondisclosure agreements and other methods, to protect our proprietary technologies. We hold 39 patents and have 104 patent applications pending for protection of our significant technologies. We cannot assure you that the degree of protection offered by patents or trade secret laws will be sufficient. Furthermore, we cannot assure you that any patents will be issued as a result of any pending applications, or that, if issued, any claims allowed will be sufficiently broad to protect our technology. In addition, it is possible that existing or future patents may be challenged, invalidated or circumvented. Competitors in both the U.S. and foreign countries, many of whom have substantially greater resources, may apply for and obtain patents that will prevent, limit or interfere with our ability to make and sell our products, or develop similar technology independently or design around our patents. Effective copyright, trademark and trade secret protection may be unavailable or limited in foreign countries. In addition, we provide the computer programming code for our software to selected customers in connection with their product development efforts, thereby increasing the risk that customers will misappropriate our proprietary software.

***We have incurred substantial indebtedness as a result of the sale of convertible debentures.***

As of March 31, 2006, we have \$140,000 of 1.75% convertible debentures outstanding. These debt obligations are due in 2024 and could materially and adversely affect our ability to obtain additional debt financing for working capital, acquisitions or other purposes, limit our flexibility in planning for or reacting to changes in our business, reduce funds available for use in our operations and could make us more vulnerable to industry downturns and competitive pressures. Our ability to meet our debt service obligations will be dependent upon our future performance, which will be subject to financial, business and other factors affecting our operations, many of which are beyond our control.

***Failure to manage our expansion effectively could adversely affect our ability to increase our business and results of operations.***

Our ability to successfully market and sell our products in a rapidly evolving market requires effective planning and management processes. We continue to increase the scope of our operations and have increased our headcount from 377 employees at the end of the first quarter of 2005 to 470 employees at the end of the first quarter of 2006. Our past growth, and our expected future growth, places a significant strain on our management systems and resources including our financial and managerial controls, reporting systems and procedures. To manage our growth effectively, we must implement and improve operational and financial systems, train and manage our employee base and attract and retain qualified personnel with relevant experience. We must also manage multiple relationships with customers, business partners, contract manufacturers, suppliers and other third parties. Moreover, we could spend substantial amounts of time and money in connection with our rapid growth and may have unexpected costs. Our systems, procedures or controls may not be adequate to support our operations and we may not be able to expand quickly enough to exploit potential market opportunities. If we do not manage growth effectively our operating expenses could increase more rapidly than our revenue, adversely affecting our statement of operations.

## Risks Related to Our Industry

***Failure of consumer demand for advanced displays and other digital display technologies to increase would impede our growth and adversely affect our business.***

Our product development strategies anticipate that consumer demand for advanced televisions, multimedia projectors, liquid crystal display panels, digital streaming media devices and other emerging display technologies will increase in the future. The success of our products is dependent on increased demand for these display technologies. The potential size of the market for products incorporating these display technologies and the timing of its development are uncertain and will depend upon a number of factors, all of which are beyond our control. In order for the market in which we participate to grow, advanced display products must be widely available and affordable to consumers. In the past, the supply of advanced display products has been cyclical. We expect this pattern to continue. Undercapacity in the advanced display market may limit our ability to increase our revenues because our customers may limit their purchases of our products if they cannot obtain sufficient supplies of LCD panels or other advanced display components. In addition, advanced display prices may remain high because of limited supply, and consumer demand may not grow.

***If products incorporating our semiconductors are not compatible with computer display protocols, video standards and other devices, the market for our products will be reduced and our business prospects could be significantly limited.***

Our products are incorporated into our customers' products, which have different parts and specifications and utilize multiple protocols that allow them to be compatible with specific computers, video standards and other devices. If our customers' products are not compatible with these protocols and standards, consumers will return these products, or consumers will not purchase these products, and the markets for our customers' products could be significantly reduced. As a result, a portion of our market would be eliminated, and our business would be harmed.

***Intense competition in our markets may reduce sales of our products, reduce our market share, decrease our gross profit and result in large losses.***

Rapid technological change, evolving industry standards, compressed product life cycles and declining average selling prices are characteristics of our market and could have a material adverse effect on our business, financial condition and results of operations. As the overall price of advanced flat panel display screens continues to fall, we may be required to offer our products to manufacturers at discounted prices due to increased price competition. At the same time, new, alternative technologies and industry standards may emerge that directly compete with technologies that we offer. We may be required to increase our investment in research and development at the same time that product prices are falling. In addition, even after making this investment, we cannot assure you that our technologies will be superior to those of our competitors or that our products will achieve market acceptance, whether for performance or price reasons. Failure to effectively respond to these trends could reduce the demand for our products.

We compete with specialized and diversified electronics and semiconductor companies that offer advanced display, digital TV and IPTV semiconductor products. Some of these include ATI, Genesis Microchip, I-Chips, ITE, JEPICO Corp., Koninlijke Philips Electronics, Macronix, Mediatek, Media Reality Technologies, Micronas, MStar Semiconductor, Inc., Realtek, Renesas Technology, Sigma Designs, Silicon Image, Silicon Optix,

## [Table of Contents](#)

STMicroelectronics, Sunplus Technology, Techwell, Topro, Trident, Trumpion, Weltrend, Zoran and other companies. Potential competitors may include diversified semiconductor manufacturers and the semiconductor divisions or affiliates of some of our customers, including Intel, LG Electronics, Matsushita Electric Industrial, Mitsubishi, National Semiconductor, NEC, nVidia, Samsung Electronics, Sanyo Electric Company, Sharp Corporation, Sony Corporation, Texas Instruments and Toshiba Corporation. In addition, start-up companies may seek to compete in our markets. Many of our competitors have longer operating histories and greater resources to support development and marketing efforts. Some of our competitors may operate their own fabrication facilities. These competitors may be able to react more quickly and devote more resources to efforts that compete directly with our own. In the future, our current or potential customers may also develop their own proprietary technologies and become our competitors. Our competitors may develop advanced technologies enabling them to offer more cost-effective and higher quality semiconductors to our customers than those offered by us. Increased competition could harm our business, financial condition and results of operations by, for example, increasing pressure on our profit margin or causing us to lose sales opportunities. We cannot assure you that we can compete successfully against current or potential competitors.

***The cyclical nature of the semiconductor industry may lead to significant variances in the demand for our products and could harm our operations.***

In the past, the semiconductor industry has been characterized by significant downturns and wide fluctuations in supply and demand. Also, during this time, the industry has experienced significant fluctuations in anticipation of changes in general economic conditions, including economic conditions in Asia and North America. The cyclical nature of the semiconductor industry has led to significant variances in product demand and production capacity. We may experience periodic fluctuations in our future financial results because of changes in industry-wide conditions.

### **Other Risks**

***The anti-takeover provisions of Oregon law and in our articles of incorporation could adversely affect the rights of the holders of our common stock by preventing a sale or takeover of us at a price or prices favorable to the holders of our common stock.***

Provisions of our articles of incorporation and bylaws and provisions of Oregon law may have the effect of delaying or preventing a merger or acquisition of us, making a merger or acquisition of us less desirable to a potential acquirer or preventing a change in our management, even if the shareholders consider the merger or acquisition favorable or if doing so would benefit our shareholders. In addition, these provisions could limit the price that investors would be willing to pay in the future for shares of our common stock. The following are examples of such provisions in our articles of incorporation or bylaws:

- our board of directors is authorized, without prior shareholder approval, to increase the size of the board. Our articles of incorporation provide that if the board is increased to eight or more members, the board will be divided into three classes serving staggered terms, which would make it more difficult for a group of shareholders to quickly change the composition of our board;

## Table of Contents

- our board of directors is authorized, without prior shareholder approval, to create and issue preferred stock with voting or other rights or preferences that could impede the success of any attempt to acquire us or change our control, commonly referred to as “blank check” preferred stock;
- members of our board of directors can only be removed for cause;
- the board of directors may alter our bylaws without obtaining shareholder approval; and
- shareholders are required to provide advance notice for nominations for election to the board of directors or for proposing matters to be acted upon at a shareholder meeting.

***Our principal shareholders have significant voting power and may take actions that may make it more difficult to sell our shares at a premium to take over candidates.***

Our executive officers, directors and other principal shareholders, in the aggregate, beneficially own 23,222,641 shares or approximately 48% of our outstanding common stock and exchangeable shares as of April 28, 2006. These shareholders currently have, and will continue to have, significant influence with respect to the election of our directors and approval or disapproval of our significant corporate actions. This influence over our affairs might be adverse to the interest of our other shareholders. In addition, the voting power of these shareholders could have the effect of delaying or preventing a change in control of our business or otherwise discouraging a potential acquirer from attempting to obtain control of us, which could prevent our other shareholders from realizing a premium over the market price for their common stock.

***The price of our common stock has and may continue to fluctuate substantially.***

Investors may not be able to sell shares of our common stock at or above the price they paid due to a number of factors, including, but not limited to:

- actual or anticipated fluctuations in our operating results;
- actual reduction in our operating results due solely to the adoption of Statement of Financial Accounting Standards No. 123R, which requires, among other things, the expensing of stock options beginning in 2006;
- changes in expectations as to our future financial performance;
- changes in financial estimates of securities analysts;
- announcements by us or our competitors of technological innovations, design wins, contracts, standards or acquisitions;
- the operating and stock price performance of other comparable companies;
- announcements of future expectations by our customers;
- changes in market valuations of other technology companies; and
- inconsistent trading volume levels of our common stock.

In particular, the stock prices of technology companies similar to us have been highly volatile. These fluctuations often have been unrelated or disproportionate to the operating performance of those companies. Market fluctuations as well as general economic, political and market conditions including recessions, interest rate changes or international currency fluctuations, may negatively impact the market price of our common stock. Therefore, the price of our common stock may decline, and the value of your investment may be reduced regardless of our performance.

***We may be unable to meet our future capital requirements, which would limit our ability to grow.***

We believe our current cash and marketable security balances will be sufficient to meet our capital requirements for the next twelve months. However, we may need, or could elect to seek, additional funding prior to that time. To the extent that currently available funds are insufficient to fund our future activities, we may need to raise additional funds through public or private equity or debt financing. Additional funds may not be available on terms favorable to us or our shareholders. Furthermore, if we issue equity securities, our shareholders may experience additional dilution or the new equity securities may have rights, preferences or privileges senior to those of our common stock. If we cannot raise funds on acceptable terms, we may not be able to develop or enhance our products, take advantage of future opportunities or respond to competitive pressures or unanticipated requirements.

### *Continued compliance with new regulatory and accounting requirements will be challenging and require significant resources.*

We are spending a significant amount of management time and external resources to comply with changing laws, regulations and standards relating to corporate governance and public disclosure, including the Sarbanes-Oxley Act of 2002, new SEC regulations and NASDAQ Stock Market rules. In particular, Section 404 of the Sarbanes-Oxley Act of 2002 requires management's annual review and evaluation of our internal control systems, and attestations of the effectiveness of these systems by our independent registered public accounting firm. The process of documenting and testing our controls has required that we hire additional personnel and outside advisory services and has resulted in additional accounting and legal expenses. While we invested significant time and money in our effort to evaluate and test our internal control over financial reporting, a material weakness was identified in our internal control over financial reporting in 2004. In addition, there are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including cost limitations, the possibility of human error, judgments and assumptions regarding the likelihood of future events, and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can provide only reasonable assurance of achieving their control objectives.

### **Item 6. Exhibits.**

- 10.1 Pixelworks, Inc. 2006 Senior Management Bonus Plan (incorporated by reference to Exhibit 10.1 to the Company's Current Report on Form 8-K filed February 14, 2006). +
- 10.2 Pixelworks, Inc. 2006 Management Salary and Equity-Based Compensation Table (incorporated by reference to Exhibit 10.2 to the Company's Current Report on Form 8-K filed February 14, 2006). +

Treasurer and Secretary*

## CERTIFICATION

I, Allen H. Alley, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Pixelworks, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
  - a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
  - b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
  - c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
  - d. Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
  - a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
  - b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
